NEXUS is a registered trademark of Korg. Digital Tools for Literacy. 17 item. Digital Tools for Literacy. Q: How do I center a table in bootstrap using only CSS? I'm relatively new to CSS & the web and have been frustrated by trying to center a CSS centered table. I've built the table using table-layout:fixed but the text wraps around due to the width of the table being fixed. Here's a jsfiddle of the table with how it sits in the webpage. If you try to open it in a browser (assuming you have the latest version of chrome) I think it will show properly. A: Your solution should be - table { display: table; table-layout: fixed; width: 100%; vertical-align: middle; margin: 0 auto; } DEMO Q: Find an example of an Rado space which is not first-countable and is homeomorphic to  $[0,1]$  Find an example of an Rado space which is not first-countable and is homeomorphic to  $[0,1]$ . I know that  $\text{R}^\omega$  (or any  $c_0$ -subspace) is an example of a non-first countable Rado space. A: The closed unit ball (in the trivial norm) of  $\ell_\infty$  is a perfect, non-Archimedean metric space. The only spaces homeomorphic to it are  $[0,1]$  and  $S_1$ . A Rado space is second countable, so it is first countable. A perfect, non-Archimedean metric space is always ultrametric (i.e. all distances are strictly greater than the corresponding diameter), and a perfect metric space is thus Rado. This argument shows that your space is Rado and homeomorphic to  $[0,1]$ : the product of a perfect, non-Archimedean metric space with  $\ell_\infty$  is Rado and a perfect, ultrametric metric space is still ultrametric. This argument also shows that there is no
